Yasir Zafar

Roll number: 23L-3029 · l223029@lhr.nu.edu.pk

Education

- **BS Computer Science**, FAST NUCES — 2023 to 2027. Currently in the seventh semester; coursework includes DevOps.

Skills

- Linux and Bash scripting, file permissions, cron-style scheduling
- Git (branching, remotes, collaboration workflow)
- Docker and Docker Compose, multi-container applications
- Node.js and Express, REST APIs, PostgreSQL
- AWS fundamentals: S3, IAM roles and policies, EC2, Lambda

Projects

Task Tracker (Docker Compose)

A three-service task application: an Nginx frontend, a Node.js/Express API and a PostgreSQL 16 database. Services sit on separate networks, use health checks to control start-up order, and keep data in a named volume.

CSV Data Analyzer

A containerised Node.js web app that accepts a CSV upload (5 MB limit), parses it on the server and draws the result with Chart.js. Includes a health endpoint and a Dockerfile.

This CV, hosted on AWS

The same CV served twice from one private S3 bucket: by Apache on an EC2 instance that re-syncs every few minutes, and by a Python Lambda function behind a function URL. Access uses least-privilege IAM roles; no access keys are used.
